

Unit 2: Logarithms

Topic: Properties of Logs

Objective: *SWBAT simplify expressions by using the properties of logs.*

Warm Up #2:

TRUE

FALSE

Which of the following statements are **not** TRUE??

1) $\log_3 9 = \ln e^2$	2) $e^{\ln x^3 + 1} = ex^3$	3) $6\ln e = e^6$
4) $e^{1 - \ln 5} = 5e$	5) $2\ln e^{x+7} - 1 = 2x + 13$	6) $9\log 100 = 4^{\log_4 16} + 2$

Properties of Logs

Remember that logs are exponents. Consequently, the properties of logs are similar to those of exponents.

Property #1:	Property #2:	Property #3:
$\ln x^a = a \ln x$	$\ln(cd) = \ln c + \ln d$	$\ln\left(\frac{c}{d}\right) = \ln c - \ln d$

The properties of logs are used to expand and condense expressions containing logs.
